Established in 2001, Modoloco studio is the result of the collaboration among two young architects who believe in a common approach to projects and working strategies among various fields of the design practice. They both aim to create a space open to experimentation and research where different cultures and experiences melt together and become reality throughout architecture, industrial design and visual communication. Modoloco has worked for several companies who specialized in furniture and illumination (Murano due, Sphaus, Talleruno, Celda, rf-yamakawa, Segno, Mister Wood, etc) and has already exhibited at fairs and events in Italy and abroad.
